Quezon City University   2018 - 2022

PROJECTS

Angels of Peace Academy Online LMS

This is my Capstone Project for affected students during the COVID19 pandemic, this website allows the teachers creates exams and assignments and allows students to take exams and view scores and grades. Built using PHP, JavaScript and Bootstrap 5

This website has 3 user types

- Admin – can manage the database and view user logs, and perform CRUD operation
- Teacher – can create Quiz and Exam with timer, and Assignment for student
- Students – can view their grades and exam results

FakeBook

A social media app that allows users to connect other users. This website is a way to find and connect with friends and remain updated on their activities.
Key features:
- Implemented CRUD operation and Email Verification
- Users can follow each other, view profile, and post multiple images, and user can post story
- Users can message following/follower and create group chat with real-time message and view online users

Built using React JS, Express JS, Tanstack Query, Socket IO, and Material UI

Repo | Demo

Portfolio

A web portfolio to showcase my personal projects. Built using React JS and Tailwind CSS
